

# The Academy SPOTLIGHT

JUNE 1ST, 2018

The 3rd graders won an ice skating party at the auction this year but unfortunately, the ice melted before they got there. So they happily celebrated with a pool party at the Broom's house this week instead. :)

The fourth graders made a Rainbow in a Jar this week for their science lesson on density. By using blue soap, green food coloring with water, olive oil, and red food coloring mixed with rubbing alcohol, they created this rainbow project as a class. One of our fourth graders, Garrett, said that “when you look up from the bottom it blends like a rainbow—it’s really cool.”

Left: Logan Clark was recognized for an **Education Fully Alive Moment** last month when he spontaneously decided to give the donuts he bought for his class for his birthday to the construction workers who have been working at the school. Way to go, Logan!

The 8th graders have been finishing up their STEM program with New Heights by designing and making their own longboards. They began the project by designing boards on paper. They traced their designs on the wood and glued that onto a second piece of wood. New Heights cut out their boards and then the kids sanded and lacquered them. The 8th graders will put the trucks on his week and test them before graduation on Monday, June 11th.
